Hands-on, 5': Defining IoT

What does *Internet of Things* mean to you?

Write down your definition.

We will check out the result together.

Vision

Internet of Things (IoT)

"Internet-connected computers, with sensors and actuators." — [@tamberg](#)

"Physical objects with a Web API." — [@hansamann](#)

IoT: "Global network of computers, sensors and actuators, connected through Internet protocols."

Web of Things: "RESTful Web services that measure or manipulate physical properties." — [@gsiot](#)

Internet of Things (IoT)

“The IoT can be viewed as a global **infrastructure** for the information society, enabling advanced services by interconnecting (**physical** and **virtual**) things based on existing and evolving interoperable information and communication technologies (ICT).”— **Recommendation ITU-T Y.2060**

History of IoT (not new!)

The first telemetry system was rolled out in Chicago way back in **1912**. It is said to have used **telephone lines** to monitor data from power plants.

Telemetry expanded to weather monitoring in the **1930s**, when a device known as a **radiosonde** became widely used to monitor weather conditions from balloons.

History of IoT (not new!)

Broad adoption of M2M technology began in the 1980s with wired connections for **SCADA** (supervisory control and data acquisition) on the factory floor.

In the 1990s ADEMCO built their own **private radio network** because cellular connectivity was too expensive.

In 1995, Siemens introduced the **first cellular module** built for M2M.

History of IoT (not new!)

“Machine to Machine” (M2M)
(~1970s +)

Internet of Things Beginnings

Carnegie Mellon Internet
Coke Machine (1982, 1990)

Internet Toaster
(1990)

Trojan Room Coffee
Pot
(first webcam)
(1991)

Drivers of IoT

Small, inexpensive, low power computers.

Small, inexpensive, low power sensors.

Short and long range connectivity.

Cloud computing and storage.

Standard (IoT) protocols.

Moore's law

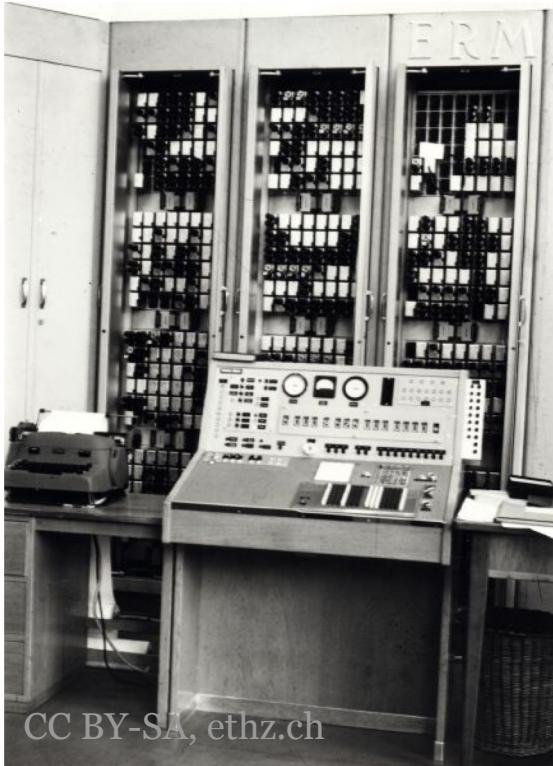

"Moore's law is the observation that the number of transistors in a dense integrated circuit doubles about every two years." — [Wikipedia](#)

Gordon Moore, a founder of Intel, [noted this in 1965](#).

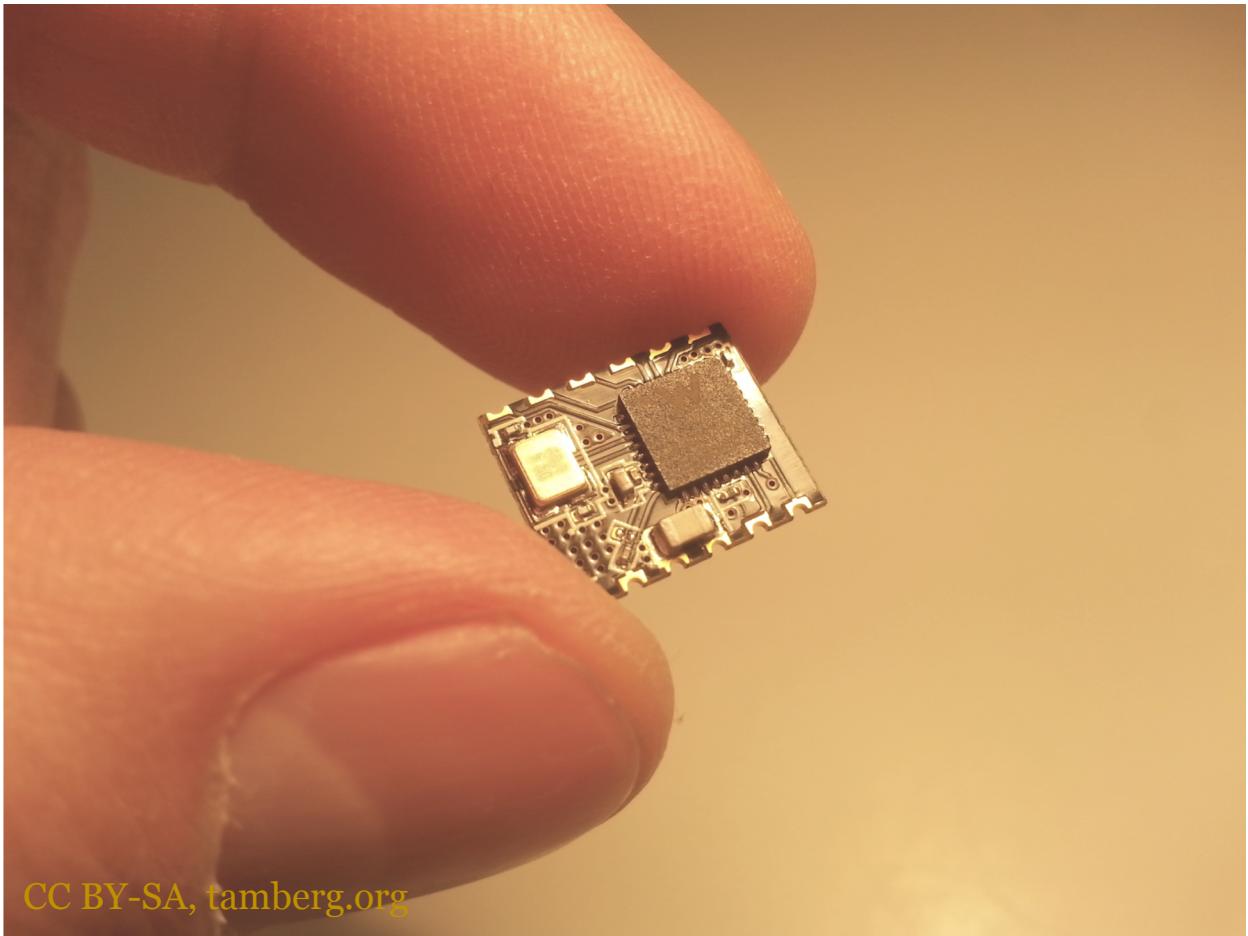

- => Computers become more powerful, less expensive.
- => The same power is available in a smaller package.
- => Small computers can be embedded into things.

Moore's law

Things – ITU definition

“Things are objects of the physical world (physical things) or of the information world (virtual world) which are capable of being identified and integrated into communication networks. Things have associated information, which can be static and dynamic.” – Recommendation **ITU-T Y.2060**

Things – ITU definition

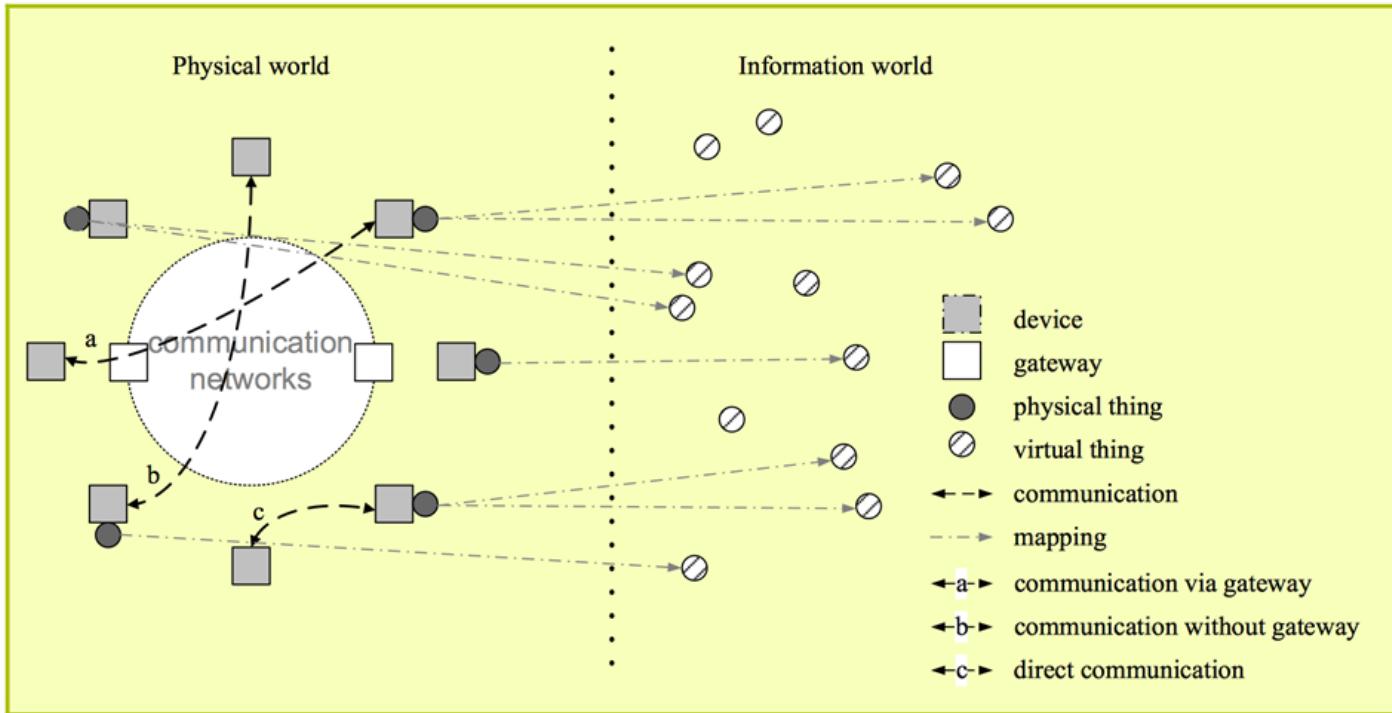

“**Physical** things exist in the physical world and are capable of being **sensed**, **actuated** and **connected**. Examples of physical things include the surrounding environment, industrial robots, goods and electrical equipment.” – Recommendation **ITU-T Y.2060**

Things – ITU definition

“**Virtual** things exist in the information world and are capable of being **stored, processed** and **accessed**. Examples of virtual things include multimedia content and application software.”

– Recommendation ITU-T Y.2060

Things – ITU definition

Device – ITU definition

“A device is a piece of equipment with the **mandatory capabilities of communication** and optional capabilities of sensing, actuation, data capture, data storage and data processing. Some devices also execute operations based on information received from the information and communication networks.” — Recommendation ITU-T Y.2060

Fundamental characteristics – ITU

Interconnectivity: With regard to the IoT, anything can be interconnected with the global information and communication infrastructure.

Heterogeneity: The devices in the IoT are heterogeneous as based on different hardware platforms and networks. They can interact with other devices or service platforms through different networks.

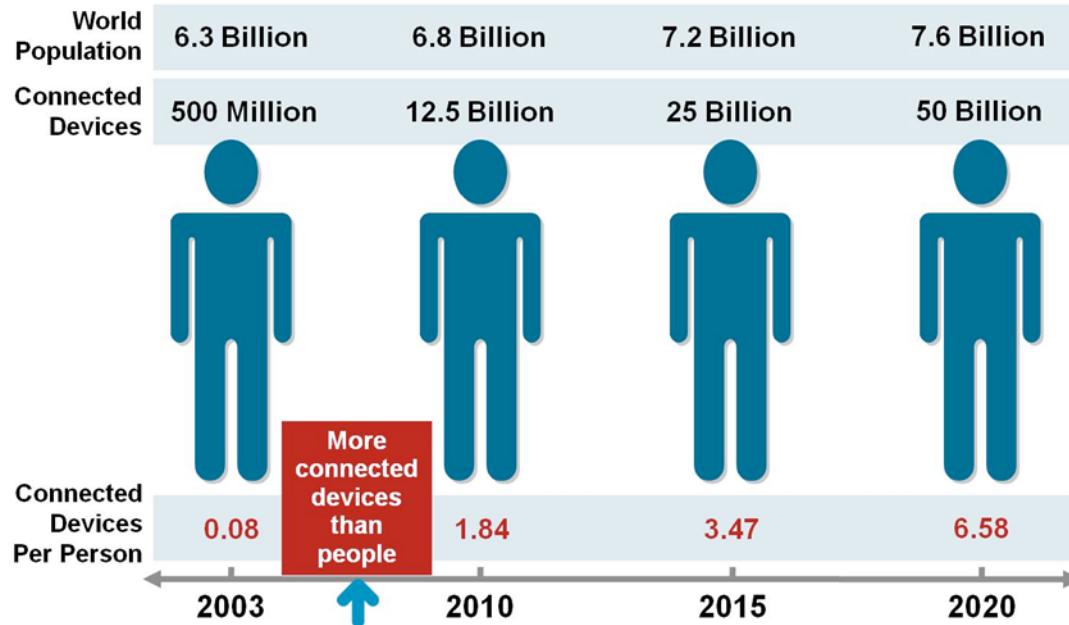

Fundamental characteristics – ITU

Dynamic changes: The state of devices change dynamically, e.g., sleeping and waking up, connected and/or disconnected as well as the context of devices including location and speed. Moreover, the number of devices can change dynamically.

Fundamental characteristics – ITU

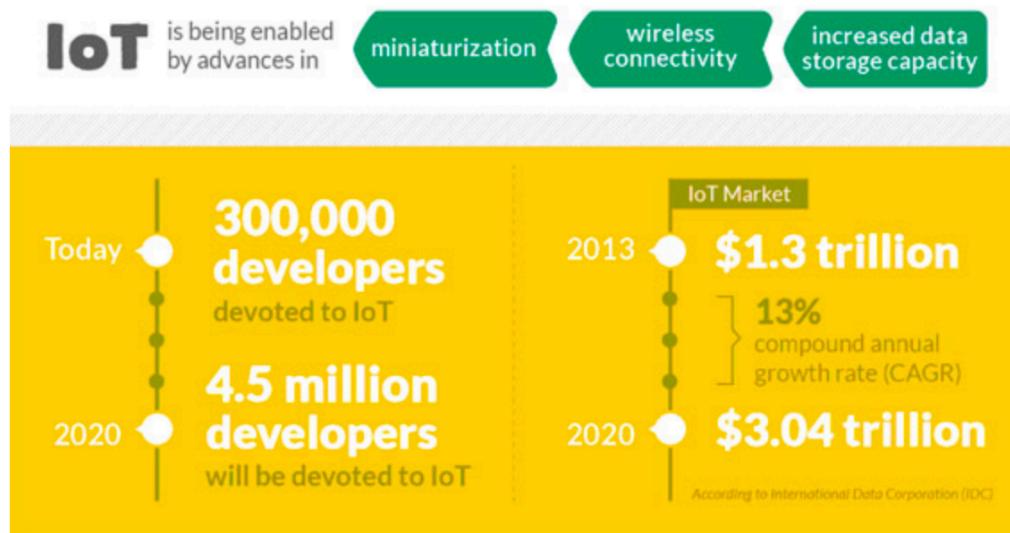

Enormous scale: The number of devices that need to be managed and that communicate with each other will be at least an order of magnitude larger than the devices connected to the current Internet. The ratio of communication triggered by devices as compared to communication triggered by humans will noticeably shift towards device-triggered communication.

Internet of Fewer Things

One to many to any

History of the future

One to many to any: ICTs from happy few to the masses

Connectivity

Ability to communicate with another computer.

Personal area network (PAN, e.g. BLE, Zigbee).

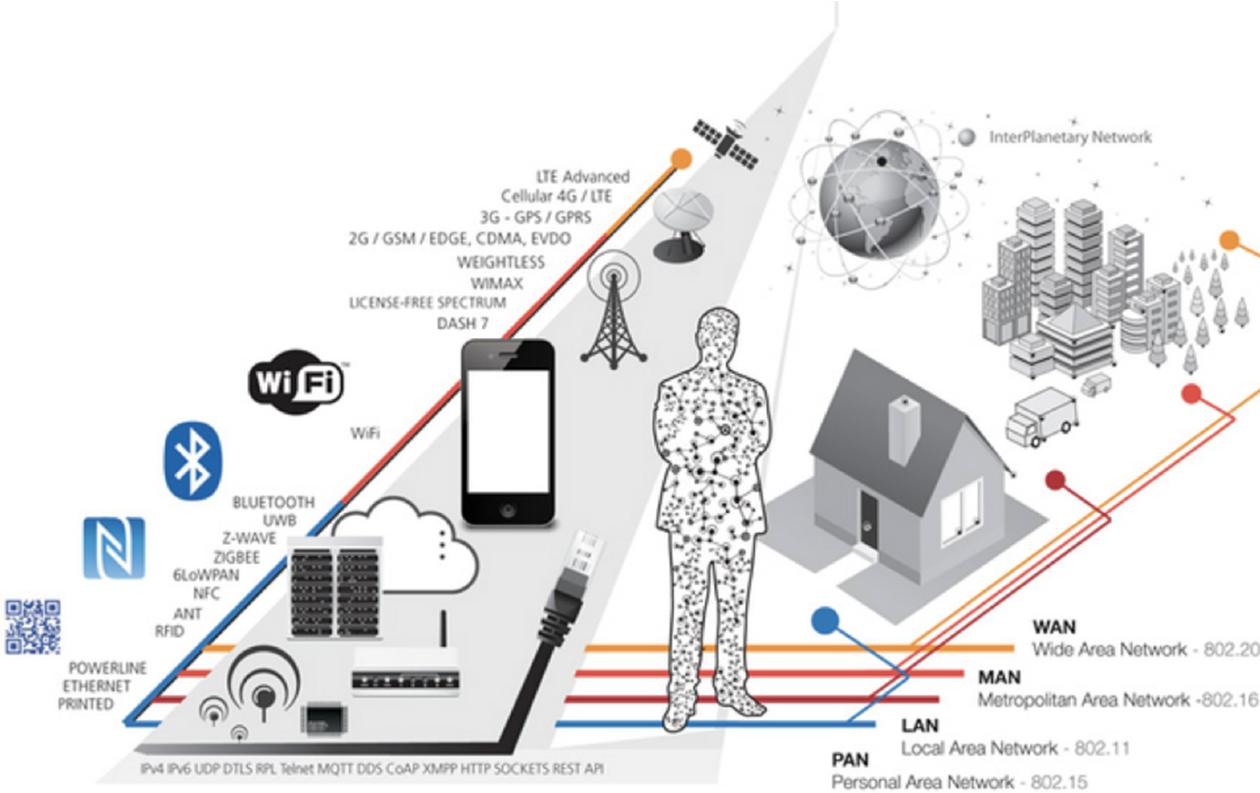

Local area networks (LAN, e.g. Ethernet, Wi-Fi).

Wide area networks (WAN, e.g. 3/4G, LoRaWAN).

The range grows from "room" to "building" to "city"
(e.g. BLE, 30m; Wi-Fi, 100m; LoRaWAN, 2-15km).

Connectivity

IoT high level use cases

IoT enables these core use cases, in different flavors.

Efficiency (e.g. trash bins let you know they are full).

Convenience (e.g. remotely preheat a holiday home).

New insights (e.g. a crowdsourced air quality map).

Sectors include connected consumer products,
citizen sensing, industrial IoT and many more.

It's beautifully designed to keep you comfortable and help save energy.

[Proven energy savings.](#)
Can pay for itself in two
years or less.¹

Turns itself down when
you're away.

Control it from anywhere.²

Remote temp sensing.

Smart lights Smarter controls

Philips Hue is not just a smart bulb, it's a smart lighting system. The smart lights, Hue Bridge, and smart controls will forever change the way you experience light.

Hue lights

These smart and energy-efficient LED lights come in a wide variety of shapes, sizes, and models to suit your space.

Hue Bridge

The heart of your Philips Hue system, the Bridge acts as a smart hub, connecting your devices to your smart lights. You can add up to 50 Philips Hue lights and accessories to one Bridge.

Hue app

Control your smart lights quickly and conveniently with the Philips Hue app.

ambient™

Ambient Umbrella

Glowing intelligence
lets you know that there's
rain in today's forecast.

Citizen sensing

Self-built sensors, open data, nonprofit, e.g.

[Safecast.org](#), a crowdsourced radiation map.

[Oxford Flood Network](#), measuring water levels.

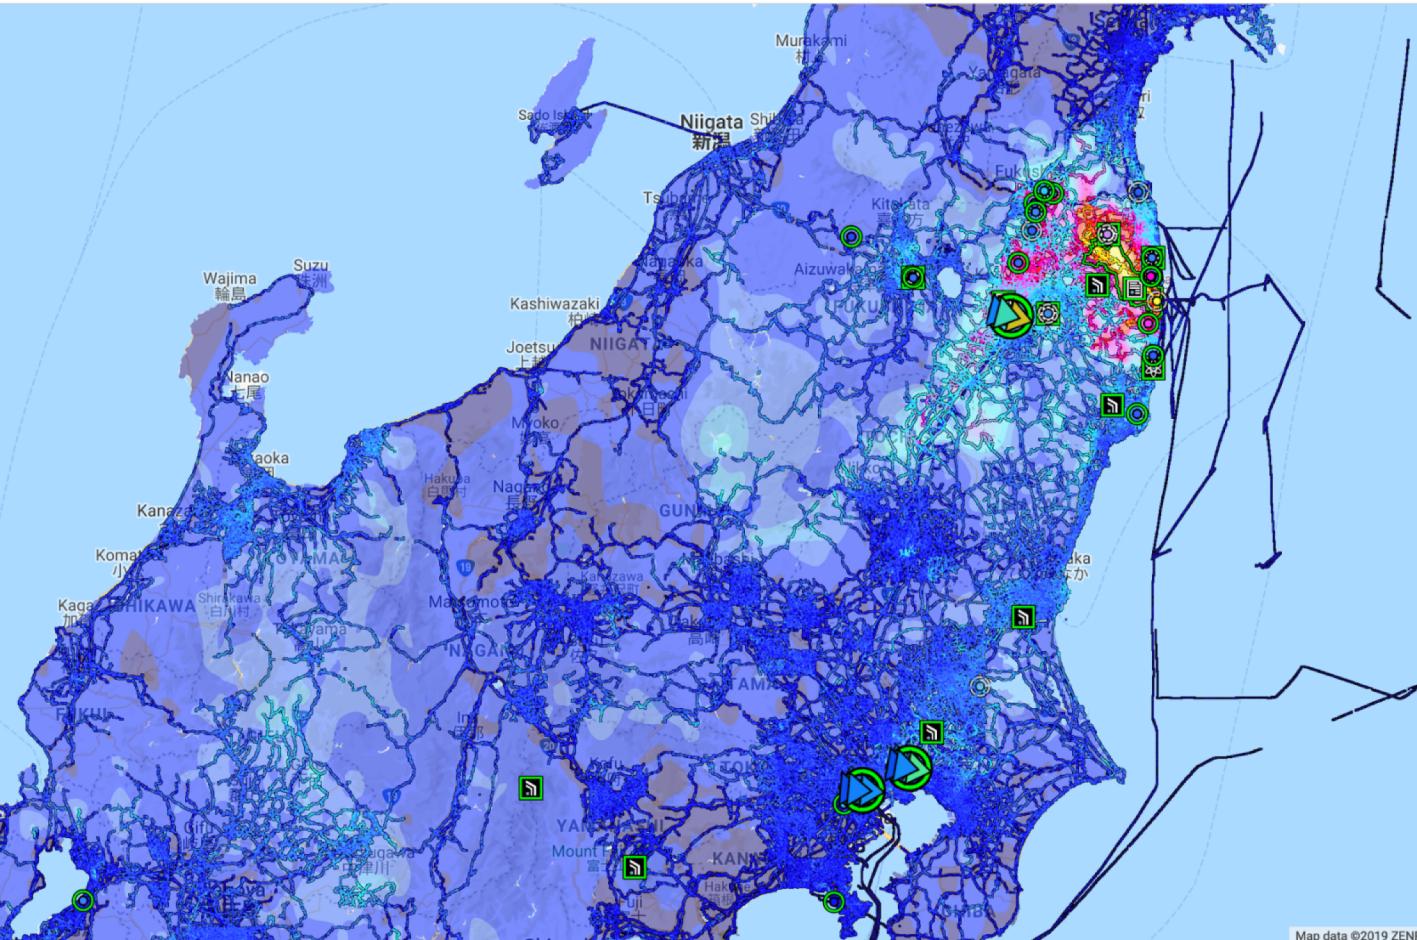

[Luftdaten.info](#), particles and nitrogen oxides map.

[Smart Citizen Kit](#), air quality.

Important IoT System Qualities

Security, to keep devices, network & backend secure.

Privacy, to keep people in control of their own data.

Interoperability, to become part of an ecosystem.

Openness, standards & open source build trust.

See, e.g. [betteriot.org principles](https://betteriot.org/principles) for guidance.

top Your WiFi-connected thermostat x +

The Washington Post
Democracy Dies in Darkness

Your WiFi-connected thermostat can take down the whole Internet. We need new regulations.

The government has to get involved in the “Internet of Things.”

By **Bruce Schneier**

Bruce Schneier is a security technologist and a lecturer at the Kennedy School of Government at Harvard University. His new book, "[Click Here to Kill Everybody](#)," will be published November 3, 2016

Late last month, popular websites like Twitter, Pinterest, Reddit and Facebook went down for most of a day. The [distributed denial-of-service attack](#) that caused the outage, which exploited vulnerabilities that made the attack possible, was as much a failure of regulation as it was of technology. If we want to secure our increasingly computerized world, we need more government involvement in the security of the “Internet of Things” and increased regulation of what are now critical and life-threatening devices. It’s no longer a question of if, it’s a question of when.

First, the facts. Those websites went down because their domain name

As Bruce Schneier recently explained about IoT-device security, "The market can't fix this because neither the buyer nor the seller cares."
